

Workshop Proposal (1 PD)

SAP HANA Authorisations

Everything you need to know about native HANA authorisations

Why authorisations?

The awareness of the topic of authorisations in order to establish standards and principles in the allocation of privileges and roles has changed significantly in recent years. What used to be a „necessary evil“ is now already planned into proofs of concepts and during the implementation of projects and is becoming increasingly important. The risk from incomplete or over-reaching is enormous and can lead to compliance and audit problems, which can mean permanent loss of reputation and even financial damage.

Questions to be clarified in general

- What are HANA native authorisations?
- When and why are HANA authorisations needed?
- How do BW analytic authorisations and HANA native analytic privileges interact?
- What is the difference to ABAP authorisations?
- What are the possibilities of HANA native user administration?

Our approach in the workshop

- Application-oriented and practical introduction to HANA native authorisations
- Completion of best practices from daily business
- Consolidation of the newly acquired knowledge on demo systems in the Innovation Lab of biX Consulting

Strengthen the newly learned

- Know-How in relation to HANA native authorisations
- Basis for solving and avoiding authorisation problems
- Basis for implementing a HANA native authorisation concept
- Handout of the workshop materials

€ 1.495,00 net. plus poss. travel expenses according to expense

We would be very pleased if this proposal meets your needs. If this is the case, but you would like to request any adjustments, please feel free to contact us at any time. We would be happy to design your individual workshop together with you.
