WORKSHOP PROPOSAL

TRANSFORMING ANALYTICS – SAP BW, WHAT NOW?

Many long-standing SAP Business Warehouse (BW) customers are currently faced with questions about how they should position themselves regarding business intelligence and analytics in the future.

SAP's on-premise BW is practically at the end of its life cycle - depending on the version, as early as the end of 2027. Possible cloud systems are not yet on an equal level in terms of features or are fundamentally unconvincing in terms of their architecture or the costs incurring.

YOUR VALUES

biX Consulting introduces you to the current SAP Analytics portfolio. Based on your specific system landscape, biX develops necessary facts in order to define the next steps for your analytics strategy.

In addition, we will use current trends in data warehousing to show you how you can build future-proof architectures with and without SAP tools in order to meet future requirements for a stable and company-wide data platform.

CONTENT OF THE WORKSHOP

- Analysis of your current system landscape
- Facts about the SAP Analytics portfolio
    - Current roadmaps
    - Lifecycle of the components
    - Future orientations
- General trends in data warehousing
    - Data Lakes
    - Data Science and Machine Learning
    - Data Lakehouse
- Influence of a S/4HANA migration
- Future-proof target architectures

Of course, additional topics can be highlighted or special focal points can be set on request.

RESULTS

The following results will be delivered in this workshop:

- Assessment of the future security of the system landscape currently used for analytics
- Overview of current trends in data warehousing
- Next steps for a future-proof architecture

We would be pleased if this offer meets your requirements. However, if this is the case and you would like to make any adjustments, please feel free to contact us at any time. We would be happy to organize your individual workshop together with you.
